

# Tech Sheet: General Electric On-Stand Engine Covers

(general-electric-GE.pdf)

GE CF-6 Off-Link Engine Cover

## Section 2: Engine Covers

**Off-Link Engine Covers** protect commercial aircraft engines while in storage. They protect the engine from the elements, prevent surface contamination from oil leaks, and help stop "parts robbing". There are three types: Complete, partial and component covers.

**Complete covers** enclose the entire engine. There are openings for mount points and engine access. Closures are heavy duty zippers, secured or tightened with straps and industrial buckles. High visibility reflective strips are sewn around the perimeter to enhance safety, and to prevent collisions from moving vehicles. Directional indicators, company insignia, and a forms pouch are sewn onto each cover. Where needed strap loops are placed at hoist points for easy and fast installation. Locking mechanisms can be installed on the cover to help prevent unauthorized access.

**Partial covers** are designed as "Rain Caps", which cover the top and sides but do not prevent oil contamination from the engine to the surface below. Their construction details are similar to the complete cover designs, but they can be easier to install.

**Component Covers**, such as intake or exhaust covers, are designed according to customers' specifications. A wide variety of materials and attachment details are available, as well as custom imprinting.

**FABRIC & THREAD:** For strength, durability and ease of use we make these covers of the heaviest nylon ballistic cloth. It is sewn in multiple courses with *Tenara* thread, and reinforced with heavy vinyl cloth at high-wear points.

GE CF-6 Off-Link Engine Cover

GE90-115 Propulsor QEC Engine Long-term Storage/Transport Cover "Bag" Boeing 777

Description	Part Number	Price
